Cleantech and sustainability jobs: Ready to staff for a green future?

During the first quarter of 2024 alone, over **10,000 US firms posted nearly 44,000 unique job ads for the cleantech industry.**

Specifically, today's top cleantech jobs include:

- Environmental scientists
- Solar installers
- Carbon reduction engineers

- Sustainability experts

The need is growing – but these jobs require a blend of general technical skills and industry-specific knowledge in renewable energy systems, environmental science, and emerging technologies.

Think of solar installers: They need both technical skills like solar energy systems installation and transferable skills like power tool operation and roofing.

Filling these roles can be a challenge for employers. Learn more about today's emerging cleantech industry – and also read up on employee burnout and the latest 3PL industry trends in this month's Adecco Talks.
